

The TRB Committee on **Transportation Issues in Major U.S. Cities (ABE30)**  
invites presentations on:

# Innovative Solutions to Congestion in Urban Areas

## **Description:**

Urban congestion is a constant challenge for many urban environments. Whereas in the past, the solution was to encourage suburban development or widen streets to accommodate more vehicles, cities are now pioneering more innovative solutions that embrace higher density while still managing to keep congestion to a minimum. TRB's Committee on Transportation Issues in Major U.S. Cities (ABE30) is seeking abstracts for presentations at TRB's 2014 Annual Meeting that describe examples of Innovative Solutions to Congestion in Urban Areas. Presentations will examine ways in which congestion is analyzed and how contemporary solutions are developed, implemented and, ultimately, effective.

---

**Abstract Submission Due Date:** August 31, 2013

**Selected Papers will be Asked to Present** at TRB's 2014 Annual Meeting, January 12-16, 2014

**This Call for Presentations can also be viewed online at:**
